

# Contents

<b>1</b>	<b>Background Concepts</b>	<b>3</b>
1.1	Computer Algebra Systems . . . . .	3
1.2	Mathematical Pseudo-Language (MPL) . . . . .	4
1.3	Automatic Simplification and Expression Structure . . . . .	7
1.4	General Polynomial Expressions . . . . .	13
1.5	Miscellaneous Operators . . . . .	15
<b>2</b>	<b>Integers, Rational Numbers, and Fields</b>	<b>19</b>
2.1	The Integers . . . . .	19
2.2	Rational Number Arithmetic . . . . .	39
2.3	Fields . . . . .	46
<b>3</b>	<b>Automatic Simplification</b>	<b>65</b>
3.1	The Goal of Automatic Simplification . . . . .	65
3.2	An Automatic Simplification Algorithm . . . . .	94
<b>4</b>	<b>Single Variable Polynomials</b>	<b>113</b>
4.1	Elementary Concepts and Polynomial Division . . . . .	113
4.2	Greatest Common Divisors in $\mathbf{F}[x]$ . . . . .	129
4.3	Computations in Elementary Algebraic Number Fields . . . . .	149
4.4	Partial Fraction Expansion in $\mathbf{F}(x)$ . . . . .	170
<b>5</b>	<b>Polynomial Decomposition</b>	<b>183</b>
5.1	Theoretical Background . . . . .	184
5.2	A Decomposition Algorithm . . . . .	193

<b>6</b>	<b>Multivariate Polynomials</b>	<b>205</b>
6.1	Multivariate Polynomials and Integral Domains . . . . .	205
6.2	Polynomial Division and Expansion . . . . .	211
6.3	Greatest Common Divisors . . . . .	233
<b>7</b>	<b>The Resultant</b>	<b>269</b>
7.1	The Resultant Concept . . . . .	269
7.2	Polynomial Relations for Explicit Algebraic Numbers . . . . .	294
<b>8</b>	<b>Polynomial Simplification with Side Relations</b>	<b>301</b>
8.1	Multiple Division and Reduction . . . . .	301
8.2	Equivalence, Simplification, and Ideals . . . . .	322
8.3	A Simplification Algorithm . . . . .	338
<b>9</b>	<b>Polynomial Factorization</b>	<b>355</b>
9.1	Square-Free Polynomials and Factorization . . . . .	356
9.2	Irreducible Factorization: The Classical Approach . . . . .	367
9.3	Factorization in $\mathbf{Z}_p[x]$ . . . . .	377
9.4	Irreducible Factorization: A Modern Approach . . . . .	408
	<b>Bibliography</b>	<b>441</b>
